# WHO PANDEMIC TREATY TIMELINE

the nation-state, whereby countries typically enter international institutional arrangements, such as agreements, treaties, and conventions. The core institutional arrangements for each issue area (within the context of pandemic prevention focused on the wildlife trade for human consumption) include: WHO and World Organisation for Animal Health (WOAH) in the case of public health; the Convention on International Trade in Endangered Species of Wild Fauna and Flora (CITES), the Convention on the Conservation of Migratory Species of Wild Animals, and the Convention on Biological Diversity in the case of biodiversity conservation; the Food and Agriculture Organization of the United Nations (FAO) in the case of food security; and the World Trade Organization in the case of international trade. Furthermore, additional topical and regional international institutional arrangements exist in all four policy domains. Over time, actors beyond the nation-state (eg, non-state actors and subnational governments) have become more actively engaged across all four governance systems.

## Evidence of silos in the current institutional landscape for pandemic prevention

The creation of separate silos for the global governance for public health, biodiversity conservation, food security, and trade has resulted in gaps regarding zoonosis prevention emerging from the wildlife trade. The gaps

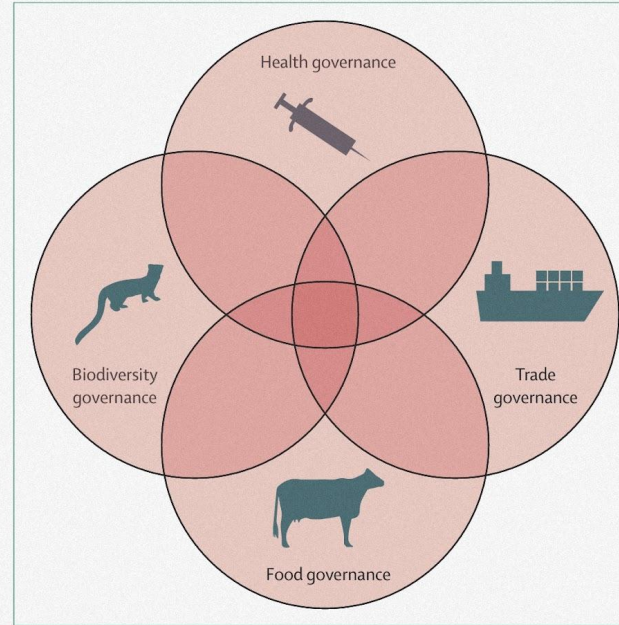

Figure 2: The governance response to prevent pandemics caused by the wildlife trade lies at the intersection of four governance systems

and the Quadripartite Partnership on One Health<sup>36</sup>), a new coordinating institutional arrangement, the so-called pandemic treaty, is under consideration by the international community but is not without challenges. Although

## Global governance for pandemic prevention and the wildlife trade

*Eduardo Gallo-Cajiao, Susan Lieberman, Nives Dolšak, Aseem Prakash, Ronald Labonté, Duan Biggs, Christine Franklin, Tiffany H Morrison, A M Viens, Richard A Fuller, Raphael Aguiar, Pedro Fidelman, James E M Watson, Cécile Aenishaenslin, Mary Wiktorowicz*

Although ideas about preventive actions for pandemics have been advanced during the COVID-19 crisis, there has been little consideration for how they can be operationalised through governance structures within the context of the wildlife trade for human consumption. To date, pandemic governance has mostly focused on outbreak surveillance, containment, and response rather than on avoiding zoonotic spillovers in the first place. However, given the acceleration of globalisation, a paradigm shift towards prevention of zoonotic spillovers is warranted as containment of outbreaks becomes unfeasible. Here, we consider the current institutional landscape for pandemic prevention in light of ongoing negotiations of a so-called pandemic treaty and how prevention of zoonotic spillovers from the wildlife trade for human consumption could be incorporated. We argue that such an institutional arrangement should be explicit about zoonotic spillover prevention and focus on improving coordination across four policy domains, namely public health, biodiversity conservation, food security, and trade. We posit that this pandemic treaty should include four interacting goals in relation to prevention of zoonotic spillovers from the wildlife trade for human consumption: risk understanding, risk assessment, risk reduction, and enabling funding. Despite the need to keep political attention on addressing the current pandemic, society cannot afford to miss the opportunity of the current crisis to encourage institution building for preventing future pandemics.
